# the ZANFEL ZONE

Your Information Resource for Poison Ivy, Oak and Sumac

Volume 9, Issue 3

Welcome to the Zanfel Zone! We hope you are having a wonderful fall! As always, Zanfel is here to provide you with important information on plant identification, prevention, and treatment to help you get safely through this season.

Got poison ivy? Zanfel can be found in the first aid section of your local pharmacy!

## Poison Ivy's Fall Colors

Poison ivy's fall colors are in full swing in many parts of the county. Poison ivy is usually one of the very first plants to have its leaves change color in the fall. You'll look out into the woods and everything will be green, except for the bright yellow, orange, or red leaves on a poison ivy vine or shrub.

Eastern Poison Ivy

Western Poison Oak

One important thing to remember is the leaves and other parts of poison ivy, oak, and sumac plants remain toxic for years after they have died. Likewise after the leaves have fallen off, all parts of the plant remain toxic throughout the fall and winter. Be careful while raking leaves and doing fall yard cleanup in areas where poison ivy is present. Wearing long pants, long sleeves, and gloves is important. Do not burn poison ivy plant material. The poison ivy plants' oily toxin, urushiol, is dispersed in the smoke, and can cause a severe/systemic reaction for anyone who is exposed.

## Dan's Big Pumpkin

Zanfel's Customer Service Manager, Dan Boelman, and his family grew a really huge pumpkin! It weighed 1,049 Pounds, and was in the top 10 at the 2019 Pumpkinfest Weigh-Off in Anamosa, Iowa. Dan and his family are looking forward to growing another giant pumpkin next year.
